

# EntriWorX Installation

## Easy to install. Quicker to complete.

### What EntriWorX Installation offers —an overview:

#### EntriWorX Unit for easy connection of products

- Instead of complex wiring and different transfer protocols, the new **EntriWorX Unit** connects the individual access components via a CAN bus system.

#### EntriWorX Setup App for easy commissioning

- In the **EntriWorX Planner**, a digital twin is created with predefined templates and then made available in the cloud. Thanks to predefined parameters, the door solution can be commissioned quickly and easily.

#### Quick troubleshooting

- The **EntriWorX Setup App** runs a connectivity test. If any components are not functioning, the malfunction is recognized and displayed. That way, malfunctions can be located digitally and fixed quickly.

#### Technical information and visualizations

- All door plans, documentation and installation videos are available in the app at all times and from anywhere, which helps to simplify the commissioning process.

### More reliability and speed in the installation of door systems thanks to digital interconnections.

We increase your productivity—Digital progress is causing products to not only become more versatile and powerful but also more complex. Access systems in particular are subject to strict industry standards and security requirements.

To make the installation process even easier and more reliable, we have developed a comprehensive door solution that seamlessly interconnects our individual products, reducing installation time and complexity.

### EntriWorX Installation—Simply faster with digitalized door installation and commissioning.

The **EntriWorX Planner** provides all relevant data for the commissioning on site and allows them to be transferred to the physical door solution. At the construction site, the **EntriWorX Setup App** guides the installer step by step through the commissioning process, by smart phone or tablet. After a digital check, the installation process is completed quickly.

The core of the system is the compact **EntriWorX Unit**, which significantly reduces the number of components and wiring required for the installation. The intelligent controls save valuable installation time and increase productivity.

# 64 doors—2 weeks—zero problems With EntriWorX Installation

## Performance features

### EntriWorX Unit

#### Reduction of components and complexity

- Time-saving installation due to reduced number of components.
- Collaborative and simple exchange of components.

#### The heart of operation

- The **EntriWorX Unit** is the central component for managing and controlling the door solutions once they are installed and operating.

### EntriWorX Setup App

#### Simple and quick commissioning

- The **EntriWorX Unit** connects all components with one another, and the **EntriWorX Setup App** takes care of the commissioning process.
- In the **EntriWorX Planner**, a digital twin is created with predefined templates.
- The **EntriWorX Setup App** locates any errors immediately. After a digital check, the installation process is completed quickly.

## Technical features

### EntriWorX Unit

A strong unit

- Reduced complexity thanks to easy wiring of the dormakaba components
- Simple collaboration of different components (even from third-party providers)

### EntriWorX Setup App

Complete documentation

- Specifications, floor plans, wiring and connecting diagrams
- Technical drawings for production
- BOM of components
- Installation videos
- Free app (Android)
