

EntriWorX Operation

Increased transparency and security in building operation.

What EntriWorX Operation offers —an overview:

High reaction speed and data-based insights

- Intuitive dashboards
- Remote monitoring of several decentralized systems
- Real-time notification about unexpected events such as malfunctions or blockages

Reduced downtime

- Troubleshooting instructions
- Maintenance and repairs as needed

Transparency

- Room occupancy and capacity management with real-time people counting and traffic flow
- Display of the current operating/locking status of the door as well as usage trends of access points
- Optimizing foot traffic for individual doors, adapting personnel capacity (e.g. with access after hours)

We increase your productivity.

The security profile of a building always includes the professional maintenance of its access solutions.

With round-the-clock operation, the reliability of the systems is a crucial element of guaranteeing the protection and trouble-free control of the flow of people.

EntriWorX Insights is part of our innovative **EntriWorX EcoSystem** and the solution for more efficient building management.

The data-based analyses show you in real time and also in retrospect all relevant operating and performance data of your entire network and all connected doors.

The web application Engage allows you to analyze the door operation data anytime and from any location (even mobile). If there is a malfunction, the door reports it autonomously and notifies you via push message to your smartphone, smart watch or via email.

This lets you react to malfunctions immediately and reduces downtime to a minimum.

Facility management therefore receives the right information at the right time—more efficiency, no interruptions, quick troubleshooting.

An essential element of **EntriWorX Insights** is that the operating quality of your access systems is maximized and that you are assured first-rate services on anything involving your access systems.

3,278 visitors a week. 21 access points. One dashboard.

Occupancy Insights

Organizing room occupancy the smart way

Controlling door traffic systematically

- Overview and control of room occupancy and adherence to regulations.
- Monitoring in real time and retrospectively.
- Flexible adaptation of occupancy parameters.

Analyzing traffic patterns

- Analyzing room occupancy profiles and optimizing inferred conclusions regarding personnel capacities or cleaning requirements.
- Anticipatory planning of visitor frequency

Engage web app dashboards

- Graphic illustrations for a direct understanding of data with the web application Engage.
- Exportable data for further analyses.
- Integration via API into existing customer systems.

Technical features

- For open entry areas up to 6 m (≈ 20 ft) high and up to 18 m (≈ 60 ft) wide.
- Wireless installation, data exchange without barriers even across floors. Space-saving installation.

Integration for new EntriWorX door solutions

directly via the already installed EntriWorX Unit.

Integration for existing solutions

with the dormakaba Entrivo IoT Connector.

Data integration into customer systems

via the API interface or Engage app.

Door Insights

All door functions under control

High reaction speed

- Malfunctions reported in real time.
- Troubleshooting instructions provided.
- About 50% of malfunctions can generally be corrected quickly and easily by facility management.

Various Dashboards

- React quickly and expediently with data-based Insights.

Proactive management

- As an IoT solution and with always-on connectivity, the operation, maintenance and repairs are adapted to current needs and do not adhere to any predefined maintenance schedule.

Seamless integration

- With API interfaces, the door data can easily be integrated into existing customer systems or be displayed in the Engage web application.

Curious?
We'll be glad to advise you.
